

## Sylvain Joly Design, Daveluy Creations and Lectra create the Lectra Sofa live!

Sylvain Joly Design, Daveluy Creations and Lectra join forces for an innovative development project.

### The Challenge

The rapidly increasing range of challenges for upholstered furniture manufacturers in today's market include lowering costs in the prototyping phase, reducing lead time from design to the finished product and customization while maintaining quality standards.

### Lectra's Response

Lectra's furniture solutions and expertise are revolutionizing the upholstered market. Through the creation of an exclusively designed sofa with Joly Design, Lectra, and Daveluy Creation have been transformed into physical reality. Game-changing 3D working methods using DesignConcept allowed the Lectra sofa to be developed collaboratively.

### Lectra Sofa live!

In a trailblazing project, Lectra recently got together with Sylvain Joly Design and Daveluy Creations to create an exclusive sofa from design and product development to production using DesignConcept, Vector and Versalis.

### Lectra Solutions

- DESIGNCONCEPT** Furniture

- VERSALIS** Furniture

## A winning furniture solution

With a solution that is able to virtually develop the prototype collaboratively, the perfect balance has been found between the designer's intentions, manufacturing constraints and costs. By harmonizing the input of everyone involved in the process, optimum performance levels have been achieved with a model that is 90% perfect first time and already rationalized for production.

## Meeting the new wave of market challenges

The upholstered furniture market is in the middle of a large scale renaissance. Faced with unprecedented levels of market competition and pressure, traditional prototyping and design methods are losing competitiveness. There is expanding demand for increased customization and a whole host of new features such as onboard technology, motion and modularity and the demand for immaculate quality has never been higher.

Meeting these challenges head-on, Lectra is leading the way with its range of furniture manufacturing solutions, from design & product development to cutting, that are fully adapted to anticipate the market needs of tomorrow. Trendsetting through Partnership, Expertise and Innovation, the three companies have put their extensive expertise into practice with the development of an exclusively designed sofa using Lectra's dedicated furniture solutions. With more than 30 years of experience, Lectra can help its furniture customers remain competitive while ensuring profit margins and being innovative.

## Forging the way forward for upholstered furniture design, product development and cutting

DesignConcept 3D was fundamental in the successful realization of this sofa partnership project. Styles were defined and models created quickly (using libraries for wooden components) as well as the creation of the

technical documentation to build the physical prototype. The 3D virtual prototype was built collaboratively which guaranteed that Sylvain Joly's design intentions were respected while ensuring feasibility for Pascal Daveluy. It also enabled the three companies' to keep tight control over the budget constraints.

The model was validated using video conferencing based on the virtual 3D prototype. Automatically generated production data was then sent to the CNC system (Vector and Versalis) to cut the leather and fabric pieces. In the final stage, the assembly of the physical prototype was as straightforward as building Lego only one physical prototype was needed.

## Working together apart - accelerating processes while cutting costs and removing the risk of error

3D virtual prototyping ensured that all the design and feasibility constraints were met. This minimized the gap between design intention (as validated by Stanislas Joly) and the finished model made by Pascal Daveluy as well as allowing for the precise estimation of the cost price. Working remotely via video conferencing also removed the need for extensive travel.

The model was easily defined, adjusted and validated in terms of wood structure, foam, leather, fabric patterns and sewing lines. For example, tension areas were able to be visualized on the 3D model which allowed them to anticipate and effectively position sewing lines.

*"With the ability to follow the product conception and share it with the prototypist and production teams far more easily, the development of a virtual prototype ensures that the finished product is much closer to the original design. It is a huge bonus for our industry and provides the potential for significant increases in productivity."*

### About Lectra

For forward-looking companies that breathe life into our wardrobes, car interiors, furniture and more, Lectra is committed to crafting the premium technologies that facilitate the digital transformation of their industry. Lectra's offer empowers brands and manufacturers from design to production, providing them with the market respect and peace of mind they deserve. Supporting the furniture industry, Lectra offers CAD software, cutting room solutions and expert services dedicated to upholstered models. Founded in 1973, today Lectra has 32 subsidiaries across the globe, serving customers in over 100 countries. With more than 1,700 employees, Lectra reported revenues of \$313 million in 2017. Lectra is listed on Euronext (LSS).
