

GERBER DCS 2500

The GERBER® DCS 2500 system is a high-speed, single- or low-ply, static table cutting system, designed to cut a wide **variety of fabrics**. It cuts to **within millimeters at speeds up to 1.1 meters per second** (45 inches per second).

Get accurately cut parts every time.

- The GERBER DCS 2500 employs a **powerful vacuum system** to hold material firmly in place during cutting to ensure **quality cut parts**.
- Adjust pressure on the cutting tools to cut a wide variety of materials **with precision**.
- The cutting head is designed to accommodate three tools simultaneously to minimize tool changes. **Choose from multiple types of straight knives**, wheel knives, notching tools and punches. Includes a pen for annotation. Disposable blades are inexpensive and easy to change.

Easy to use.

- Because the GERBER DCS 2500 is **highly intuitive**, migration from manual cutting is easy.
- Windows®-based software employs a graphical user interface to simplify operator training and daily use. Includes wizards to automate repetitive processes and **speed preparation of the cutting job**.
- Easily stores cutting setup files for quick retrieval to **accelerate future cut jobs**.
- The GERBER DCS 2500 is **network-compatible** for easy transfer of data from a wide variety of CAD systems.

The easy-to-use keypad controls many machine functions at the cutter.

Use up to three cutting tools and a pen on the head assembly for maximum flexibility.

V-notch and punch tools are available for additional cutting capability.

Realize a fast return on your investment.

- Automatic end cutting eliminates material waste by **cutting precisely** at the end of each marker.
- Single-ply cutting enables you to cut as orders arrive. Reduce work in process, **lead times and work planning**.
- The optional Toolpath module in CutWorks software **optimizes cut times** by sequencing parts (and internal cuts) in the most efficient order for cutting. Automatically removes common lines between parts to achieve **zero buffer cutting**.
- **No paper underlay or plastic overlay required.**
- The GERBER DCS 2500's small footprint **minimizes floor space requirements**. Several standard cutting bed lengths, widths, heights, and configurations are available to suit your needs. For optimal throughput, use split table mode of operation to cut different materials, patterns or nests. Cut on one half of the table while removing parts from the other half.

Available options and services.

- Complete service and parts supply packages.
- Training for operators, **technicians and applications personnel** is available.
- Pneumatic vacuum shutoff for single-zone or dual-zone vacuum.
- Reverse air for flotation of non-porous materials during spreading
- Large wheel package with 44.5 mm (1.75") diameter wheel to cut lofty materials.
- High torque motor for heavy duty cutting and punch drilling requirements.
- Nesting Video Projector: Project parts onto material to enable manual adjustments.

CutWorks® software offers a complete design, nesting and cutting solution.

ZipJet™, inkjet part identification system.

InfoJet™ inkjet labeling system offers fast, accurate identification of cut parts with visible and UV inks.

About Lectra

As a major player in the fashion, automotive and furniture markets, Lectra contributes to the Industry 4.0 revolution with boldness and passion by providing best-in-class technologies.

The group offers industrial intelligence solutions - software, equipment, data and services - that facilitate the digital transformation of the companies it serves. In doing so, Lectra helps its customers push boundaries and unlock their potential. The group is proud to state that its 2,500 employees are driven by three core values: being open-minded thinkers, trusted partners and passionate innovators.
