

## Non-Transfer Void Security Film

GERBER NON-TRANSFER VOID SECURITY FILM IS THE PERFECT SOLUTION FOR YOUR SECURITY APPLICATIONS. IT'S EASY TO USE WITH YOUR GERBER EDGE® AND SAVES YOU TIME AND MONEY.

### The Tamper-Evident **EDGE READY™** Material That Doesn't Leave a Trace.

Gerber Non-Transfer Void Security Film is a matte blue, non-transfer, tamper-evident material designed to provide a message of "VOID OPEN" in the face material when it is removed within 90 days on many application surfaces, eliminating the time and effort needed to clean the adhesive left by other types of security labels. Removal permanently destroys the face material thereby providing obvious evidence of tampering.

#### **Benefits:**

- No messy adhesive residue.
- Easy to print, cut, weed, and apply.
- Indoor and outdoor use.
- Create custom message and size decals.
- High-contrast film color.
- Cost effective – print only the quantity you need when you need it.

#### **Print with:**

- GERBER EDGE series thermal printers.

#### **Contour cut with:**

- Gerber 15" sprocket plotters.

#### **Typical applications:**

- Windows
- Doors
- Ballot boxes
- Files and cabinets
- Aircraft metal hatches and doors
- Retail gasoline dispenser hatch and door

### How It Works:

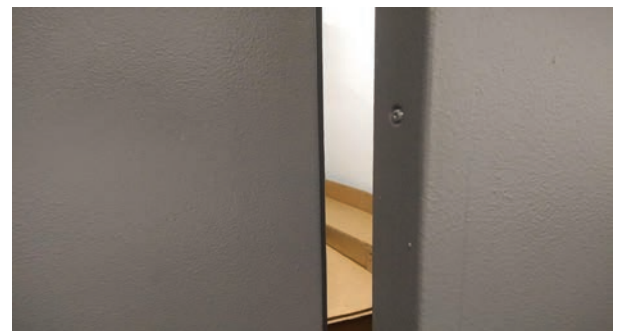

1. Appears solid blue when applied to surface (doorway in this example).

2. Tamper-evident VOID OPEN message appears and remains in film once removed from surface.

3. No residue left behind.
