

## Lectra's Environmental Policy

Lectra is committed to conducting its business in full **respect of the environment** and all stakeholders, while pursuing **ambitious sustainability goals**. This commitment is reflected in the Group's approach to sustainability, which is guided by **three founding principles**:

Lectra's Environmental Policy reflects the first principle: **Transformation**.

By leveraging technology, we help players in the fashion, automotive and furniture industries move closer to achieving their sustainability goals—**strengthening resource management**, **optimizing processes**, and **providing access to reliable information** to support their environmental decision-making.

Lectra is also committed to reducing the significant impacts of its own activities and to developing new equipment through an eco-design approach.

Whether individually, as employees or as leaders, we all need—more than ever—to take environmental challenges into account. This is all the more important as they have become a key factor in business relationships and a **strong expectation from all our stakeholders**.

### Reducing customers' environmental impact

We support our customers throughout their products' lifecycle, helping them better manage their impacts through a suite of integrated solutions that optimize:

- Value chain traceability
- Sustainability of products created
- Implementation of responsible manufacturing processes
- Rollout of more responsible marketing strategies

### Ecodesign

Our ecodesign actions for cutting equipment are guided by the following objectives:

- Reducing the environmental impact of new equipment
- Optimizing the use of materials and the end-of-life management of equipment

### Working to reduce climate change

We are committed to reducing our greenhouse gas emissions through:

- Deployment of a structured, costed climate transition plan
- Measurement and annual publication of greenhouse gas emissions
- Raising awareness among employees and partners

Mindful of future climate change, we are committed to assessing our **climate resilience** and implementing a **relevant adaptation plan**.

Lectra's Environmental Policy is based on an **Environmental Management System (EMS)** for its implementation and oversight.

In our everyday practices and across all our businesses, we have always worked to be a responsible economic player.

We are committed to a proactive policy aimed at improving the environmental footprint of our sites and support our customers in doing the same.

**The Lectra Executive Committee and the entire management team are committed to the implementation of this approach, to which each of us is called upon to contribute.**
